

March 16-20, 2015

ASCENS research results on **Engineering Autonomic Systems** were presented at the CeBIT 2015 in Hanover from 16 to 20 of March at the stand A40 of Bayern Innovativ in Hal 9. The Ludwig-Maximilians University of Munich, the Charles University of Prague and Zimory GmbH Berlin showed different applications scenarios of case studies of the cloud computing and e-mobility domains.

A selection of the tools and methods developed within the scope of the project have been applied among others to construct a decentralized cloud with autonomic nodes and to develop an intelligent traffic infrastructure for coordinating e-vehicles.
